AWS Glue ETL Pipeline with Amazon S3

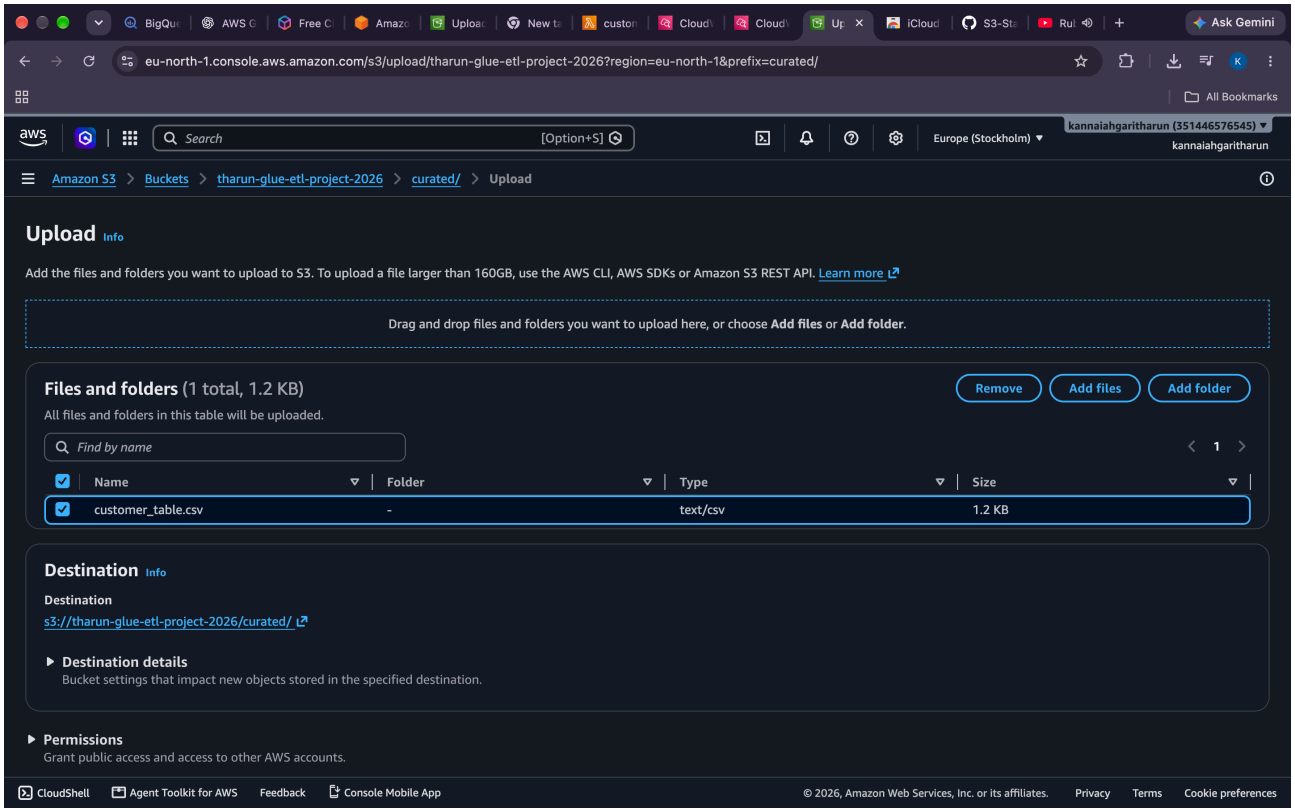

NAME : KANNAIAHGARI THARUN
BRANCH : CSE-IOT
USN : 23BTRCO043
HCLID : HCLTFP2264194

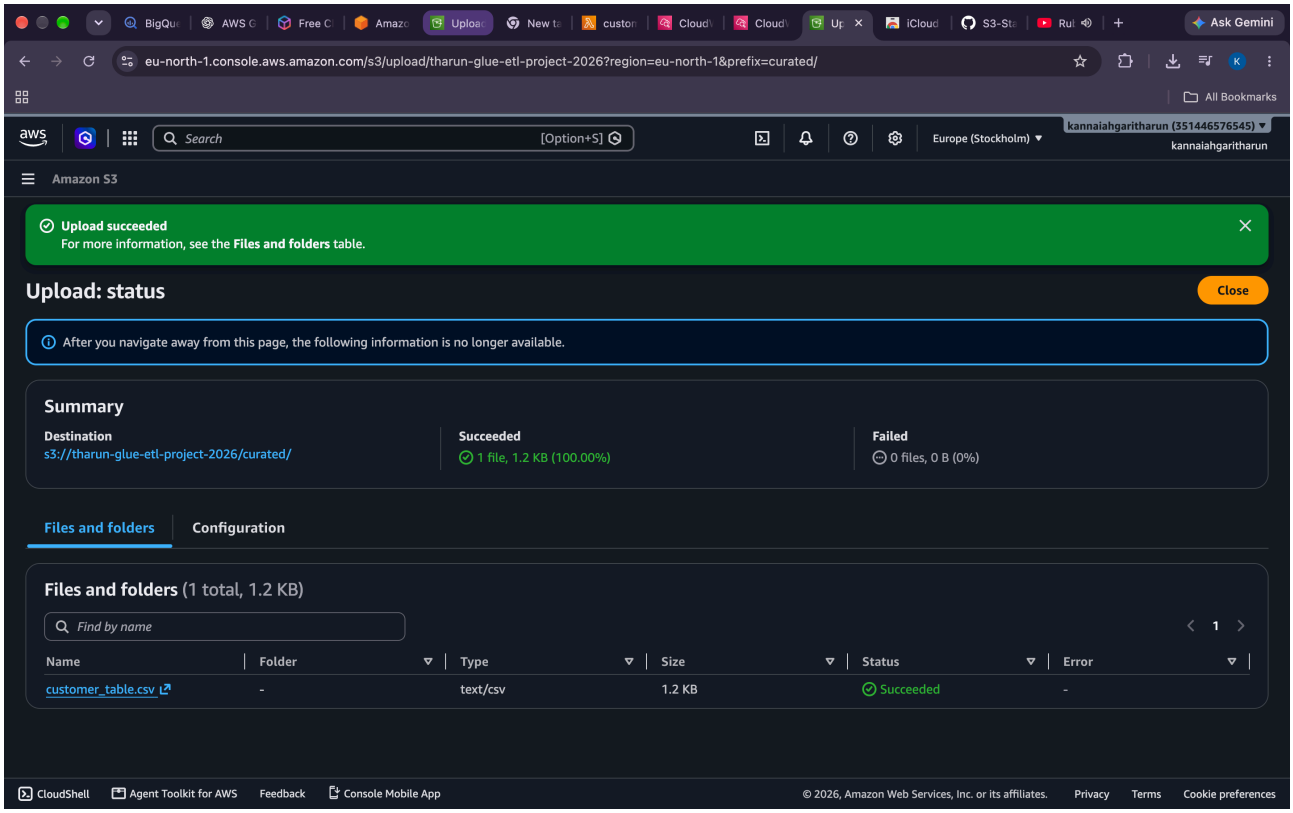

Aim

To design and implement an AWS Glue ETL Pipeline with Amazon S3 to extract employee data from CSV files, transform and clean the data using AWS Glue, and store the processed data in Amazon S3 for further analysis.

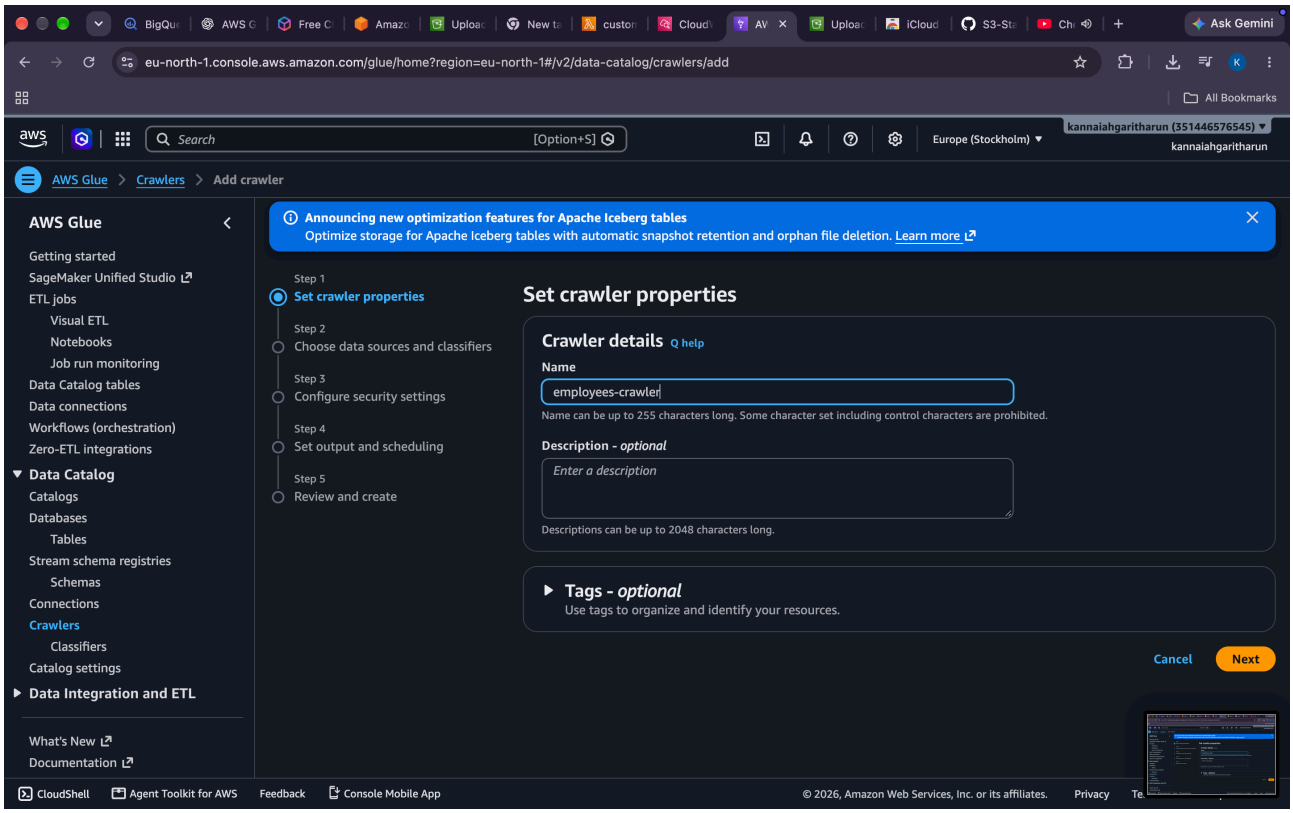

Created and added file in s3 bucket

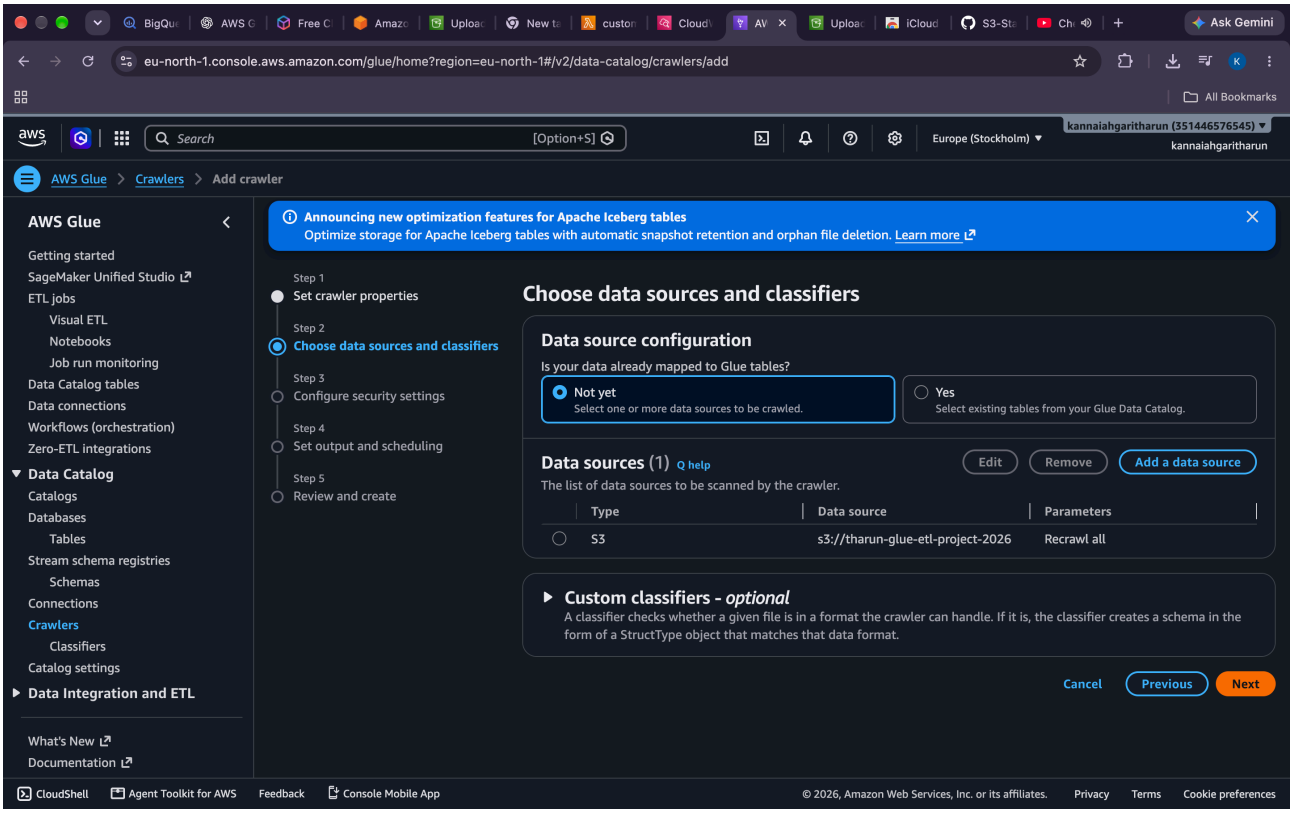

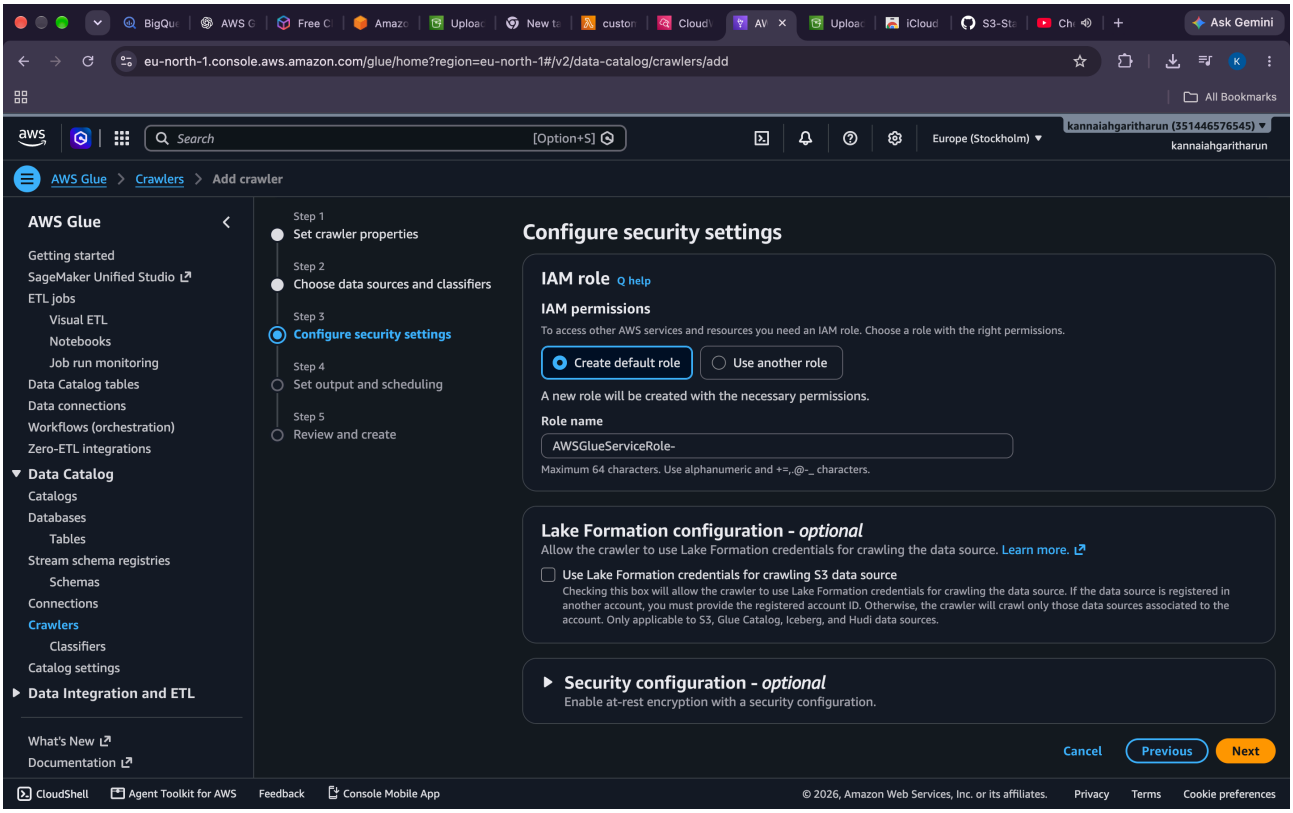

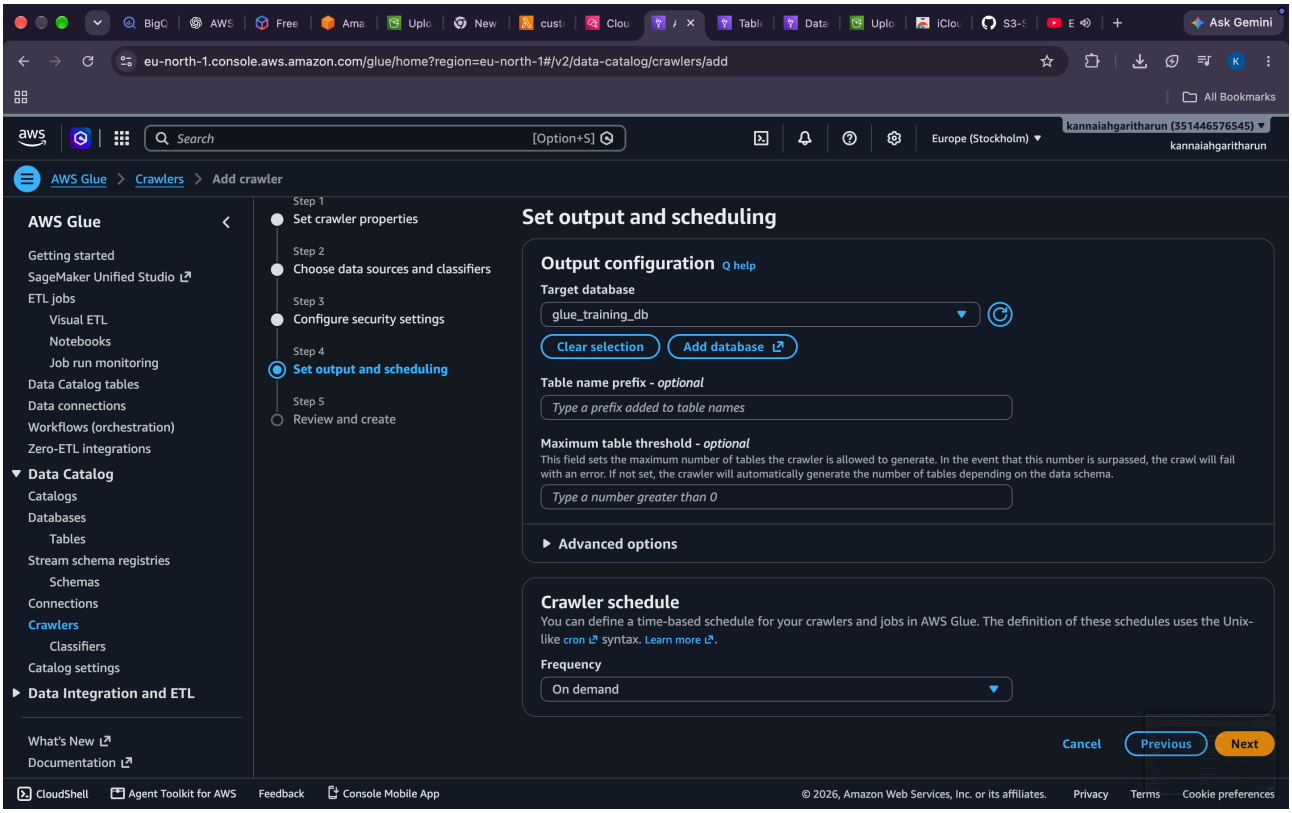

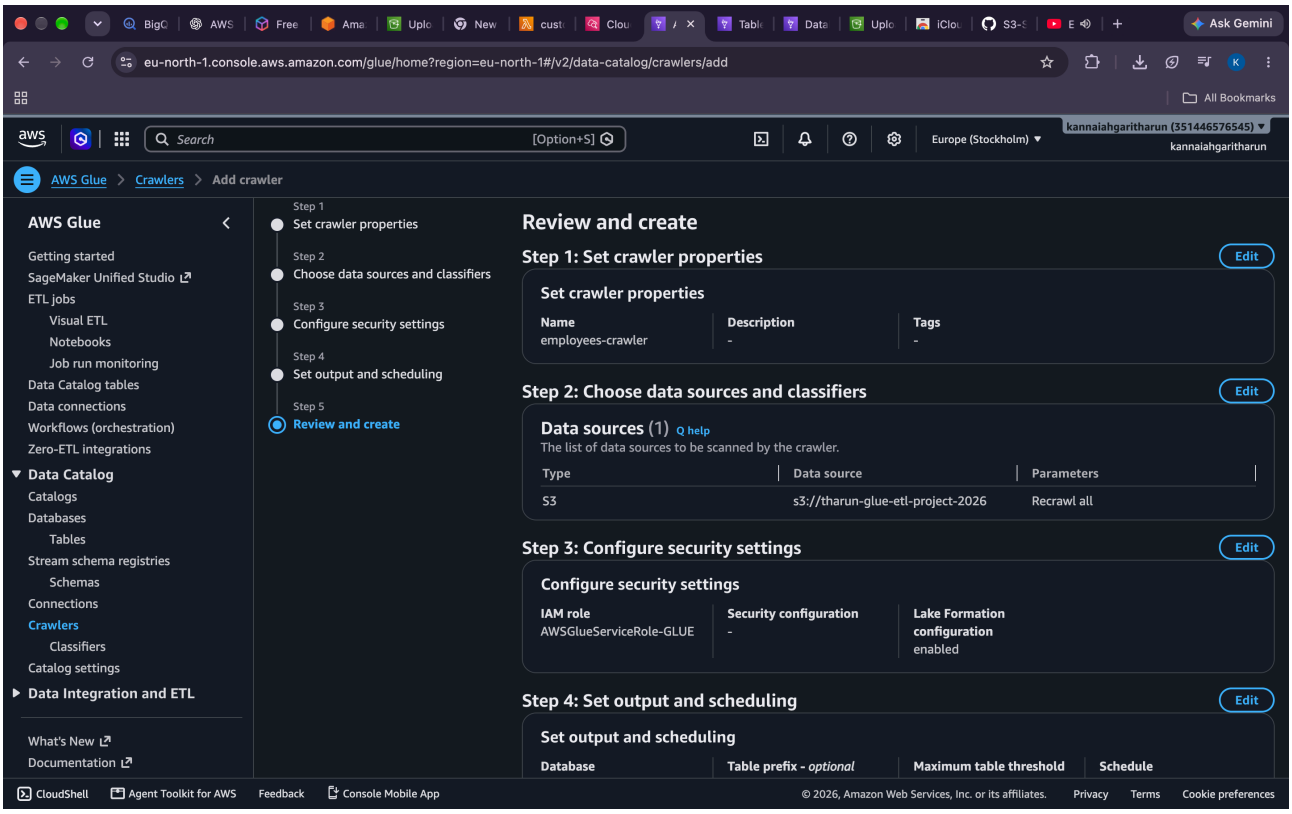

STEP 2: CREATING DATA CATLOG TABLES

Step 1
Set crawler properties
Step 2
Choose data sources and classifiers
Step 3
Configure security settings
Step 4
Set output and scheduling
Step 5
Review and create
Choose data sources and classifiers
Data source configuration
Is your data already mapped to Glue tables?
Not yet
Select one or more data sources to be crawled.
Yes
Select existing tables from your Glue Data Catalog.
Data sources (1)
Q help
Edit
Remove
Add a data source
The list of data sources to be scanned by the crawler.
Type
Data source
Parameters
S3
s3://tharun-glue-etl-project-2026
Recrawl all
Custom classifiers - optional
A classifier checks whether a given file is in a format the crawler can handle. If it is, the classifier creates a schema in the form of a StructType object that matches that data format.

IAM role
Q help
IAM permissions
To access other AWS services and resources you need an IAM role. Choose a role with the right permissions.
Create default role
Use another role
A new role will be created with the necessary permissions.
Role name
AWSGlueServiceRole-
Maximum 64 characters. Use alphanumeric and +=,.@-_ characters.
Lake Formation configuration - optional
Allow the crawler to use Lake Formation credentials for crawling the data source. Learn more.
Use Lake Formation credentials for crawling S3 data source
Checking this box will allow the crawler to use Lake Formation credentials for crawling the data source. If the data source is registered in another account, you must provide the registered account ID. Otherwise, the crawler will crawl only those data sources associated to the account. Only applicable to S3, Glue Catalog, Iceberg, and Hudi data sources.
Security configuration - optional
Enable at-rest encryption with a security configuration.

Table name prefix - optional
Type a prefix added to table names
Maximum table threshold - optional
This field sets the maximum number of tables the crawler is allowed to generate. In the event that this number is surpassed, the crawl will fail with an error. If not set, the crawler will automatically generate the number of tables depending on the data schema.
Type a number greater than 0
Advanced options
Crawler schedule
You can define a time-based schedule for your crawlers and jobs in AWS Glue. The definition of these schedules uses the Unix-like cron syntax. Learn more
Frequency
On demand
